
Supplementary Figure S6. Gene Ontology (GO) enrichment analysis of *A. thaliana* homologs of *A. arenosa* endosperm enriched maternally expressed genes (MEGs). *A. thaliana* GO categories and genome was used as background. Annotation data sets used were Cellular component (CC), Molecular function (MF) and Biological Process (BP). Numbers next to points in the plot represent the Odds enrichment ratio. Size of the point reflects the number of genes in the test list and Gene Ratio the fraction of total test list. Adjusted p-values reflect significance from Fisher's exact test with Benjamini Hochberg correction for multiple testing.
